WATERING PLASES.

COPER HOUSE, COOPERSTOWN, OTSEGO CO., N. Y., by ALBERT M. STODDARD, late of Barnum's Ketl, Baitimore Md.

This hotel is new eyen for the reception of visitors. Every effort has been made to render it the most comfortable summer resort in the Union. For beauty of account and amusements, Cooperatown is unsurpassed.

The manien formerly ewend and eccupied by the late J. Fennimore Cooper, the distinguished American nevelies has been remedided and converted into a commodition summer heat. The lewer stories will remain the same as when excupied by Mr. Cooper, and in the library will be found not only all his own works, but these of other eminent American and foreign authors. East of the main building, (which rathing all the essential features of the intestyle,) is racted an additional heilding, thirty five by seventy live feet, three stories high, which will contain a spatiou dning room, espalls of seating two hundred and fifty quests. Water is intended into the second stories of the inte hillings.

The maniform is furnished throughout in handsome style. Once the state of the late will an expense of the first will display and any of seating two hundred and fifty quests. Water is intended into the second stories of hot hundring nearly eight serve, are laid out in time and well arranged walks, shaded with trees and shrubbers of overy variety.

PLM PARK HOUSE, STATEN ISLAND, OPPOSITE New Market Bay.—The subscriber would respectfully amountee to the citizens of New York that he has fitted up this magnificant place for the reception of military and green panies, and executions of all kinds. This house is situated directly opposite Newark Bay, with a beautiful law from the day of the companies of the series of the series

American Association for the Advancement of Science.

Cleveland Meeting.

CLEVELAND, Ohio, August 28, 1853. After a long and fatiguing journey we are landed safely in the beautiful city of Cleveland. We encountered the usual accidents only, running over one cow, throwing off the locomotive near Oswego, and, finally, getting into Buffalo just one hour after the sailing of the steamer. This was compensated, however, by a ride to Niagara, when, finding it impossible to get so much as a footing and respect able dinner in the crowded hotels, we retraced our steps to Buffalo, and took the fine steamer Crescent City. I shall have occasion hereafter to speak of this truly magnificent vessel, as she has made but seven trips, and is, in my estimation, the most beautiful, well arranged, and best appointed vessel that I

Among other distinguished gentlemen who came over with us, were ex-President Fillmore and Hon. Judge Hall. They are here to attend the meeting of the association, and it is said will urge that its next session be held at Buffalo. The late President is looking much better than I ever saw him, and moves quietly and unostentatiously through the crowd that presses around him, as if he had never received an honor, or been at all distinguished from his more ordinary countrymen around him. Letting politics take the long sleep to which the late election so unmistakably pointed, it is beautiful and suggestive to see the old war-horses put on the harness of science, and strive in that nobler race that crowns the victor a real benefactor to the great brotherhood of man.

This city is one of the great evidences of Western civilization and progress. But a few years since she numbered but a couple of thousand souls. She now has a population reaching 35,000. No city in America has a prettier locality, a more healthful climate, better schools, or a more intelligent mass of citizens. Society has peculiarly the New England cast, with all of New England cultivation. Ample enterprise stands open to all. Every man seems to have his own establishment, does business on his own account, and reaps the profits himself. Thus, more than in any city that I have seen, every man in the community has a competence—is independent. Monopoly has not crushed labor, and wealth has not been the instrument of enslaving the people. I venture the assertion that no class of cities in any country has ever proved more flourishing than those on the Western lakes—a fact attributable. I have no doubt, to that general and wide spread intelligence pervading the generally unknown and unnoticed masses of society, which has enabled them to seize the ever abundant productive elements of the country, and mould them into wealth and power. The air is as pure as it is at Newport or any of the famed throng points of the East, the weather cool and delightful, the mercury at 84, and everything indicative of a pleasant meeting of the association.

As the meeting of an association like this is a matter of great importance, viewed as the index to the progress of the country and the times, in the sciences and the arts, you will, I know, indulge me in a slight review of its rise, progress and present condition, especially as it now embraces, and long has, in its membership all of the distinguished savans in this country, and many from Europe.

The "American Association for the Advancement of Science" was projected in Boston, in 1847, and grew out of the old "Aesociation of American Caologists and Naturalists," then in session. The latter association was formed in 1840, by twenty-two gentlemen, whose names are as follows:—

Prof. J. C. Booth.

Bela Hubbard, than in any city that I have seen, every man in the

ttemen, whoso names are as follows:—
Prof. Lewis C. Beck, Prof. J. C. Booth.
Charles Brigge, Jr., E.q., Dr. M. H. Boyo.
T. A. Conrad, Eq., Prof. E. Emmens, Ir. W. Horton.
C. B. Hazden, E.q., Prof. Henry D. Rogers, Prof. James C. Hail, S. W. Roberts, R. C. Taylor, This sewal bayed of signesses labous 4 foithfully, and

This small band of pioneers labored faithfully, and held meetings each year in different eastern cities, until in 1847, at the time of the meeting in Boston, the association numbered four hundred and sixty-one members; among whom we find very nearly all of the distinguished personages who before and since

this country.

This association, after resolving itself into the new association, determined to hold the first annual meeting in Philadelphia, on the 20th of September, 1848, in the Academy of Natural Sciences. The meeting was constituted by Professor William B. Rogers, of Virginia, who was the chairman of the last meeting of the Association of Geologists, &c. The constitution submitted by the committee appointed at Boston, was adopted, and a large namber of letters read from gentlemen who had been addressed by the committee. Many expressed great interest in the new association, and many sent papers for reading and publication. The organization was thus encouraged by nearly all of the great minds of the country.

After this, Professor Rogers, introduced to the Association, Wim. C. Redield, Esq., of New York, who had been elected first President of the association at Boston. Professor Walter R. Johnson had been elected first bresident of the association at Boston. Professor Walter R. Johnson had been elected first bresident of the association at Boston. Professor Walter R. Johnson had been elected first bresident of the country. I believe that this was the first meeting at which Mr. Agasiz appeared, as he had just then came to this country from his temporary sojourn in Great Britain. The association published at this meeting but a small volume, 156 pages, containing, however, most valuable papers.

I cannot forbear alluding just here to the founder of the old A seociation of Geologista and Naturalists, Prof. Lardner Vanuxen, now deceased. A native of Pennsylvania, he was edu atted at the School of Mines, in France, and made the first State geological survey of North Carolina. His whole life was devoted to science, and his whole country. He was one of a smal band who had at an early day produced a geological survey of New York, with maps and descriptions, which commanded the admiration of the world. He was seconable to authorize a geological survey of New York, with maps and description; the purpose of commanded

At the meeting in New Haven, Prof. Spencer P. Baird, of the Smithsonian Institution, was elected Permanent Secretary, and Prof. Wm. B. Rogers General Secretary.

Some of the volumes published have been very large: The first vol., Philadelphia, 156 pp.; second vol., Cambridge, 459 pp; third vol., Charleston, 215 pp.; fourth vol., New Haven, 415 pp.; fifth vol., Cincinnati, 261 pp.; sixth vol., Albany, 412 pp. These can all be obtained of Professor Baird, at Washington, or of G. P. Putnam, New York, very few of them being now in print.

It is after such labors and under such prestige that the association meets in Cleveland to-day. The meeting promises to be unusually interesting. President Pierce told me this morning that the titles of forty-two papers had already been sent in; some of them of unusual value. Thus far the attendance is vary numerous, and all the hotels, particularly the Weddell, are crowded to excess. It is pleasing to note that the most eminent men of the country are here, and that there's no bickering or strife in the association to prevent fullest and freest fraternization. I ma gine that great good will result from this meeting. The city of Cleveland invited the association, through the City Council, and voted funds to pay for the publication of the volume of proceedings. This is certainly enlightened and commendable enterprise and liberality; and doubtless her citizens will be paid by the reflex a dozen fold. The first meeting at the West was that at Cincinnati. Professor Mitchell invited it through the Astronomical Society, and the writer of this pledged the gratuitous entertainment of the members, and important travelling facilities. It was to call out and awaken Western men. The association was averse to leaving the seaboard, but is now satisfied that it was one of the most profitable meetings ever held; as the representation of Western geology, choncology, and ichthyology, was very large, while a great number of active gentlemen, before unnoticed, were brought thus into cooperation with their fellow laborers of the East and the Old World.

This association, which commenced so humbly in 1840, and was remodelled in 1848, with four hundred and sixty-

men of science in our mass, striving and toning with-out support or encouragement, are the men who have vitalized the whole land, and made the rugged moun-tain regions rich with roses of iron and gold. The following committees were appointed at the Albany meeting, and will report at this. The list indicates matters of much interest:—

indicates matters of much interest:—

Committee to examine Mr. Lyman's Telescope; the stand for Mr. Simmens' Telescope, and the Mountain Barometer of Mr. Andrews—Lieut, M. F. Maury, Prof. O. M. Mitchell, Prof. A. Caswell.

Committee to examine the Mitroscope and Lens submitted to the Association by Charles A. Spencer. Esq., of Canastota, N. Y.—Pref. J. W. Burnett, Dr. Clark.

Committe to memorialize Congress for an appropriation to enable Prof. Mitchel to perfect and apply his new Astronomical apparatus—Prof. B. Pierce, Sears C. Walker, Esq., Prof. E. Leomis, Prof. S. St. John. Prof. J. H. C. Cofin, Lieut. M. F. Maury, Capt. Charles Wikes, Prof. A. D. Bache, Prof. Jes Henry, Prof. W. B. Rogers.

Committee to arrange the details of a system of combined Meteorological Observations for North America—Prof. A. D. Bache, Capt. D. H. Lefray, Hon. W. Mitchel, W. C. Redfield, Prof. A. Guyot. Prof. Eliss Locals, Prof. J. Henry, Dr. T. R. Beck, Frof. J. H. Coffin, Prof. A. Caswell

Committee to digest a plan of reducing the observa-

W C Redfield Prof. A Guyot Prof. Elies Loomis, Prof. J. Henry, Dr. R. R. Beck, Prof. J. H. Coffin, Prof. A. Caswell
Committee to digest a plan of reducing the observations made under the direction of the Regeats of the University of New York, from 1825 to 1830, with reference to their publication, and to decide upon the stations which shall be included in this reduction—Dr. T. R. Beck, Prof. A. Guyot, and Prof. E. Loemis.
Cox. mittee on memorializing the State of New York, and other States, in regard to Geographical Surveys—Prof. A. D. Bache, Prof. O. M. Mitubol, Prof. E. Loomis, Prof. Wim. M. Gilberple, Samuel B. Ruggles, E.q., Prof. G. Hackley, and Lieat, E. B. Hant.
Committee in relation to the United States Coast Surveys—Hon. Edward Everett, of Cambridge, Mass., Prof. Caswell, of Providence, R. I. Prof. M. J. Williams, of South Carolina; Prof. Chas. F. Combridge, Mass.;

erjoyment of a social festival. We have come to give and to receive instruction and inspiration. We have come to the shores of this great lake to admite and study the rebb or which our breshren may have picked un here and there, with much toil and labor, and to learn where and how they are to be found. We have brought hither our freights of knowledge, to distribute them to the world, as they may do good. Gentleries, we have come to study our duty as scientific men. We are to learn the apparent and not very easy paradox, that Americas cannot keep pace with Europe in science, except by going ahead of her. The new world must begin to build upon a level above that of the old world; and it must build from its own materials. This is not asking too much. It is no more than was accomplished by the American ship and the American reaping machine. The Yanke who picked the hardest lock in Europe, and contrived a lock which all Engand could not pick, is but a type of American insellect. This was a work of mind, and we have a right to expect equal excellere in the higher and more abstract efforts of American garius. But above all things, it was not to be forgotten that the temple of science by whom cover built belonged to no country or clime! It is the world's temple, and all men are free of its communion. Let us not mar its beauty by writing our names upon its walls. The atome which we have inserted is not ours, it is not time—it is not mine—but it is part of the temple, incompleted to real, the child picks up the shell, innocently advances its form and coloring, and listeng, without a thought of real, to the singing of the angels within it. It is the unconsciousness of the artitude which gives it its grace and beauty, and makes the child and the shell parts of the same divided with the bickerings of any gocietus of the artitude of the construion for superior distribution and the full complaints of mortified wantly. Let us not raise the money changes? ery of nice and though the superior of the prevention of each other's lab

At the close of the address, Professor Samuel St.
John, of Ohio, was elected General Secretary, in absence of Professor Rogers, the Secretary Elect.

After this election the Secretary read the constitution. Three members of the standing committee were then elected by ballot, as follows:—Professor William Chawvenet, United States Naval Academy; Professor Wolcott Gibbs, United States Free Academy, and Dr. Losenh Leidy. University of Panneys. my; and Dr. Joseph Leidy, University of Pennsylvania.

The following resolutions, drawn and presented at

The following resolutions, drawn and presented at the Albany meeting, were unanimously adopted:—

1. That all yapers, either at the general or in the serveral sectional meetings, shall be read in the order in which they are entered upon the books of the association, except that these which may be entered by a member of the standing committee of the association, shall be particle of the sections.

2. That if any communication should not be ready at the assigned time, it shall be dropped to the bottom of the list, and shall not be entitled to take precedence of any subsequent communication.

3. That no exchanges shall be used between members, without authority of the respective standing committees.

The President read a communication from many

The President read a communication from many prominent citizens of Budalo, inviting the Associa tion to hold its next session in their city, and als-from the Buffalo Western Female Academy, tender-ing the use of their reoms, laboratory, &c. Not noted upon.

The association determined to resolve itself to-

morrow morning into two sections: one of physics and mathematics, and one of natural history, chemistry, mineralogy, geology, geography, and ethnology. of the papers presented were on mathematics and physics.

The names of one hundred and sixty-one gentle-men were presented, and elected to membership:—

Supreme Court—Special Term

Before Hon Judge Edwards.

DECISIONS.

JUN 30 — Benj, L. Billings as Sidney C. Gerrin and others—Motion to dissolve injunction granted, with \$10 costs, to abide the avent.

Heavy M. Lafferts administrator, vs. Anthony C. Wagner and others—Motion for re-sale granted.

Semuel F. Whiting vs. Tensitey Chapman—Motion for judgmen, granted.

W. D. Booth, Trustee, vs. Hiram Pend.—Motion to open rise ence denied, without costs.

Stephen G. Wood without costs.

Stephen G. Wood vs. Robert Chew and others.—Motion on the part of the plaintiff to strike out parts of the answer of the defendant. The Court held that the essential thing to be stated by the defendant was that the pre-tences which are set up in his answer were in fact made, and that they were not false and fraudulent. Instead of doing this, he has stated at length the particular circumstances under which the alleged false prefences were made. I think that his answer in this respect should be me diffed, and that varies of it should be stricken out.

DEATH OF A DISTINGUISHER STRANGER.—Died in

DEATH OF A DISTINGUISHED STRANGER.—Died in Salem, on Tuesday morning last, "Chimpannee," He arrived in the schooner Susan Kelley, Capt. Liver comb, at Salem, on the 23d inst., from Africa, in apparent good health. He expired at the residence of the captain, who, during his short illness, paid all the attention to him which kindness and courted could extend, and suitable to the position, rank, and character of the deceased. Requiescat in pace.

Lynn Bay State.
